Website Use Case Diagram

Submitted By:

Earl James Q. Rentillo

BS in Computer Science III

The Use Case Diagram is a type of UML diagram which is a high-level representation that models the functionality of a system with its possible user interactions. Through use cases comprising of actors and relationships, the dynamics of a system can be illustrated. For the website *Unmuffled: Poetry and Prose*, the said UML diagram is used to effectively illustrate the actors present upon the use of the system as well as the underlying relationship in this process.
